

August 2024 Release Notes

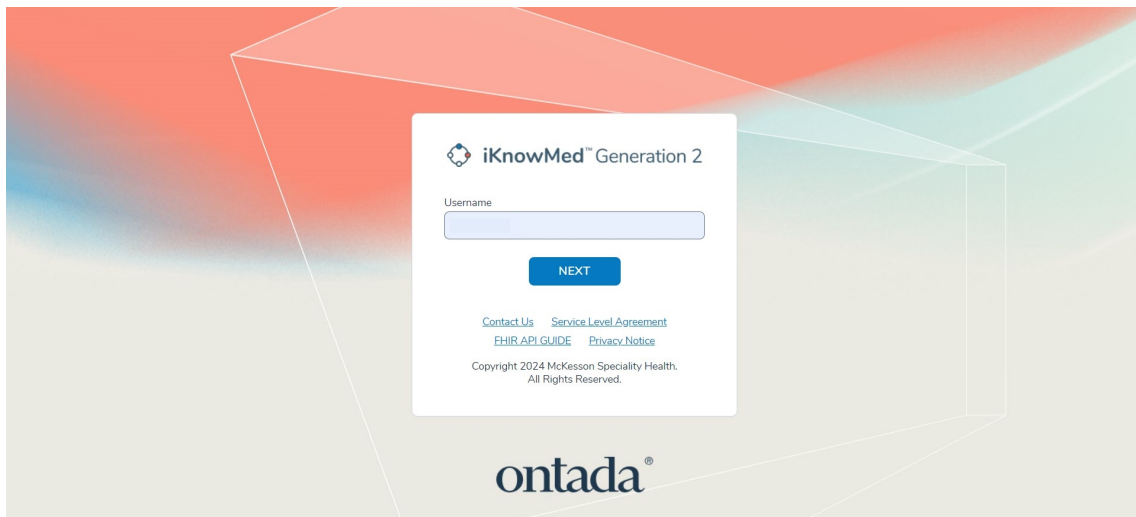

Version 3.46.1

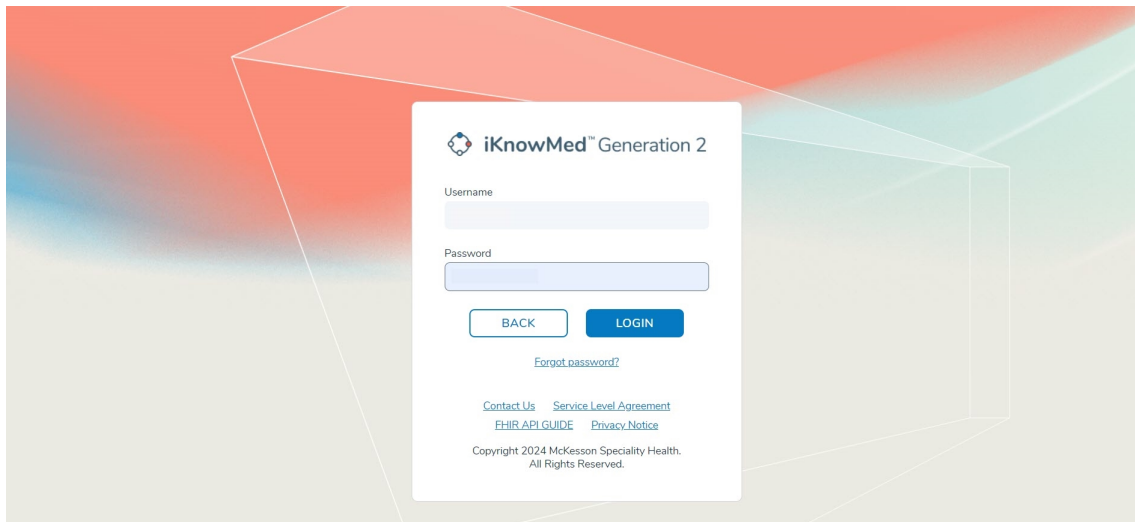

Login Screen Update: Enhanced Design, Same Trusted Process

We're introducing an updated login screen for iKnowMed Generation 2 featuring a refreshed design that aligns with Ontada's branding, providing a modern look and feel - without changing functionality.

You will continue to log in with the same two-step process: enter your username on the first screen and your password on the second screen before clicking the Login button.

This visual update is designed to enhance your experience without impacting the familiar workflow.

FIXES (A-Z)

Manage > Medications

We corrected the behavior affecting the "Restore Default Preferences" button under Manage > Medications. Previously, when users clicked this button for a selected medication, the settings did not restore correctly. With this fix, the default preferences will be restored as expected, ensuring accurate and consistent behavior.
