

# Treatment Plan Enhancements

May 9, 2025

We're introducing a user-requested enhancement to the **Recommended Treatment** section of the Treatment Plan in iKnowMed Generation 2.

## What's new

Users can now enter **free text into the Recommended Treatment** section of the plan instead of selecting from previously ordered regimens. This flexibility allows practices to document treatment plans more accurately, especially in cases where a regimen was not formally ordered (e.g., when only an oral or supportive medication was prescribed).

## How to enter free text

In the patient's treatment plan, remove prepopulated regimens by clicking the "X" in the **Recommended Treatment** field (callout 1).

Recommended Treatment ●

Amifostine Q7D X

Minimum Treatment Duration: 6 weeks ●

Recommend a palliative care specialist to seek best supportive care.

Treatments displayed on PDF		Treatments hidden on PDF	
TREATMENT	FREQUENCY	TREATMENT	FREQUENCY
		< Dexamethasone IV	once
		< Diphenhydramine IV	D5
		< Epinephrine IM	D4, once

Then, **manually type** in the appropriate treatment, e.g., type in "Prednisone" (callout 2) and click the **create** command (callout 3) or press enter on your keyboard.

Recommended Treatment ●

Prednisone X

Minimum Treatment Duration: ---

Create "Prednisone"

Expected Response to Treatment ●

Patient's expected response to treatment...
