Updates

Antiemetic Prophylaxis

To improve ease of ordering antiemetic prophylaxis, over the next two months, a prechecked prescription order for oral ondansetron will be included in all regimens containing a moderate to high emetic risk oral oncolytic agent, per NCCN Guidelines. As an exception, oral oncolytic agents with risk for QT prolongation and therefore potential additive toxicity with ondansetron, will not have ondansetron prechecked.

Regimens for the following diagnoses have been updated based on the Collaborative Care Committee voting. Changes include but are not limited to reference update, drug infusion instruction updates, renaming of regimens, premedication template updates and number of cycles.
