

# Ontada Health: e-Registration Release Notes

June 12, 2025

We're releasing several updates to the Ontada Health e-Registration experience to improve usability for practices and patients

## New "Region" column and filter in Form Completion Report

The Form Completion Report now includes a new **Region** column and filter, allowing practices to sort and view results by site location (callouts 1-2).

A new **Include Inactive Region** checkbox has also been added (callout 3). When selected, the report will display data from inactive regions, which will show as **Inactive** in the results column.

These enhancements provide greater flexibility and visibility for multi-site organizations reviewing patient form activity.

### Form Completion Report

Manually sent forms are not associated with individual locations or regions. Please select **"Unspecified"** within the Locations or Regions filter to view the data.

Region	Location	Form Name	# Notifications Delivered	# Forms Sent	# Forms Started	# Forms Completed by Patients	# Forms Reviewed	# Forms Attached in IKM	# Forms Attached in PMS	% Notifications Delivered	% Forms Started	% Forms Completed by Patients	% Forms Reviewed	% Forms Attached in IKM	% Forms Attached in PMS	% Form Completed by Patients (Notification Delivered)

## Updated Distress Thermometer form

A new version of the Distress Thermometer form will be available to send to patients after this release.

The updated form includes a revised **Practical Concerns** section with a new selectable option: **Safety**.

This enhancement allows patients to more accurately communicate concerns related to their personal safety, helping care teams better assess and respond to patient needs.

---

## Medications and allergies full integration with iKnowMed

Starting **Monday, June 23, 2025**, the "Pending" status that was introduced in the Medications and Allergies tabs of the patient chart in iKnowMed Generation 2 will become fully functional.

This means that patients completing the **Medication & Allergies** form will have their answers populate the respective tabs of their chart. The answers will appear with the "Pending" status until practice staff reviews and reconciles the information.

The completion of this enhancement allows users to review and act on patient-submitted updates to medications and allergies from Ontada Health e-Registration forms directly within iKnowMed, removing the step that required practice staff to manually enter this information into charts.
